Layer	Bronze Layer	Silver Layer (Intermediate Layer)	Gold Layer
Definition	Raw, unprocessed data as-is from sources	Clean & standardized data	Business-Ready data
Objective	Traceability & Debugging	Prepare Data for Analysis	Provide data to be consumed for reporting & Analytics
Object Type	Tables	Tables / Views	Tables / Views / Aggregated Objects / Flat Tables
Load Method	Full Load (Truncate & Insert)	Full Load (Truncate & Insert) / Incremental	Incremental / Full Load
Data Transformation	None (as-is)	Data Cleaning, Data Standardization, Data Normalization, Derived Columns, Data Enrichment	Data Modeling, Data Integration, Data Aggregation, Business Logic & Rules
Target Audience	Data Engineers	Data Engineers, Data Analysts	Data Analysts, Business Users

Silver Layer
Analysing
Explore & Understand the Data
Coding
Data Cleansing
Validating
Data Correctness checks
Docs & Version
Documenting Versioning in GIT
Gold Layer
Analysing
Explore & Understand the Business Objects
Coding
Data Integration
Validating
Data Integration Checks
Docs & Version
Documenting Versioning in GIT

Source System Interview Checklist

Business Context & Ownership

- Who owns the data?
- What Business Process it supports?

System & Data documentation

- Data Model & Data Catalog
- Architecture & Technology Stack

Storage & Integration Capabilities

- How is data stored? (SQL Server, Oracle, AWS, Azure, ...)
- What are the integration capabilities? (API, Kafka, File Extract, Direct DB, ...)

Extract & Load Strategy

- Incremental vs. Full Loads?
- Data Scope & Historical Needs

Performance & Security Guidelines

- What is the expected size of the extracts? Are there any data volume limitations?
- How to avoid impacting the source system's performance?
- Authentication and authorization (tokens, SSH keys, VPN, IP whitelisting...)
